Instructions

Connect four RMS Super Builders as shown below. Cut off the upper corners, rotate them 180 degrees and connect them on top of and centered on the other Super Builders as shown.

Fill the openings with 18" round foil balloons or with latex balloons inflated 13.5" in diameter. You may use standard round balloons or Geo balloons.

This backdrop was first used at the 1998 All Star Revue balloon convention in New Jersey, USA. (shown above)

Substitute colored balloons for the black & white pattern shown here or make your own design. This design uses 70 Black, 71 Med. Gray, and 75 White Balloons.

Reinforce the structure with three base plates and vertical pipes attached behind the backdrop.

You can make the overall display stronger by curving the backdrop rather than leaving it flat.
